PROFESSIONAL SUMMARY

Senior Software Engineer / SDET / DevOps with 6+ years of experience building backend systems, internal platforms, automation tooling, and production-like test infrastructure. I work at the intersection of software engineering, test automation, platform engineering, and DevOps, with a focus on improving reliability, delivery speed, and engineering efficiency.

EXPERIENCE

Senior DevOps Engineer – Platform & Test Infrastructure

Jun. 2026 – Present

Five9

Porto, Portugal (Hybrid)

- Own and evolve platform and test infrastructure supporting QA, Development, and DevOps workflows, with responsibility across internal tooling, automation, observability, and Pre-Production environment reliability.
- Design and develop internal platforms and full-stack engineering tools using Python, Django, Flask, FastAPI, React, TypeScript, Redis, and SQL.
- Design and maintain infrastructure automation and Infrastructure-as-Code workflows using Terraform, Ansible, AWX, Rundeck, Python, and shell scripting to standardize provisioning and operational processes.
- Drive infrastructure modernization and migration from VMware to OpenStack, including provisioning, configuration, validation, troubleshooting, and performance optimization.
- Own the architecture and reliability of QA and Pre-Production environments, improving consistency, reproducibility, scalability, and readiness for system-level validation.
- Designed and implemented internal data-ingestion pipelines that consolidate automated test execution metadata and artifacts into BigQuery, unifying results across multiple testing systems for centralized analysis and reporting.
- Build self-service operational workflows through automation and orchestration platforms, reducing repetitive manual processes and improving engineering productivity.
- Identify and remediate security vulnerabilities across infrastructure components, operating systems, application dependencies, and internal services.
- Design observability and monitoring workflows using Grafana, Prometheus, LogicMonitor, vCenter, Elastic Stack, and related systems to improve visibility into infrastructure health and system behavior.
- Develop system, integration, performance, and load-testing workflows and integrate automated validation into release and deployment pipelines.

DevOps Engineer II – Platform & Test Infrastructure

Jan. 2025 – Jun. 2026

Five9

Porto, Portugal (Hybrid)

- Developed internal applications and automation services for QA, Development, and DevOps workflows using Python, Django, Flask, FastAPI, React, TypeScript, Redis, and SQL.
- Built infrastructure provisioning and automation workflows using Terraform, Ansible, AWX, Rundeck, Python, and shell scripting.
- Built and maintained reliable QA and Pre-Production environments used for integration, system, performance, and release testing.
- Contributed to infrastructure migration from VMware to OpenStack, including provisioning, configuration, testing, troubleshooting, and performance analysis.
- Deployed and maintained orchestration and automation platforms to enable self-service operations and reduce manual intervention.
- Built monitoring and observability workflows across application and infrastructure layers using Grafana, Prometheus, LogicMonitor, Elastic Stack, and related tooling.
- Developed automated system, integration, and load-testing workflows and incorporated validation into CI/CD processes.
- Investigated application, infrastructure, and environment failures across distributed systems and supported root-cause analysis.

Software Engineer III

Jun. 2024 – Feb. 2025

GIMM

Lisbon, Portugal (Remote)

- Designed and implemented internal REST APIs and backend services using Django, Flask, and NestJS to support data-intensive research and operational workflows.
- Built backend integrations and data-processing workflows for internal platforms, improving access to structured scientific and operational data.
- Implemented CI/CD pipelines for Python applications, improving deployment consistency, testing reliability, and release repeatability.
- Led code reviews and mentored junior developers, promoting maintainable architecture, testing practices, and backend development standards.

Software Engineer II

GIMM

Jun. 2023 – Jun. 2024

Lisbon, Portugal (Remote)

- Developed REST APIs using Django and Flask and integrated them with Next.js frontends for internal platforms.
- Designed and optimized PostgreSQL schemas to improve data integrity, scalability, and query performance.
- Built CI/CD pipelines and automated test suites using pytest and Jest.
- Created reusable Python tooling for internal and external API integrations.

Software Engineer

Institute for Molecular Medicine

Jun. 2022 – Jun. 2023

Lisbon, Portugal (Remote)

- Designed and developed internal dashboards and automation tools using Django, Flask, Next.js, and PostgreSQL to support data-intensive workflows.
- Integrated Celery and Redis for asynchronous processing and background task execution in Dockerized environments.
- Implemented and optimized data-processing algorithms running on high-performance computing infrastructure.
- Built reusable backend components and scripts to automate data preparation, processing, analysis, and reporting workflows.

Junior Software Engineer

Institute for Molecular Medicine

Jun. 2021 – Jun. 2022

Lisbon, Portugal (Remote)

- Developed and documented Flask-based REST APIs for internal service-oriented systems.
- Automated recurring data-processing and operational workflows using Python and shell scripting in HPC environments.
- Contributed to unit and integration testing using pytest and Jest, improving application reliability and maintainability.
- Supported backend services, internal tooling, and workflow automation used across data-intensive applications.

Data Science Intern

Centro de Estatística e Aplicações da Universidade de Lisboa

Apr. 2021 – Jun. 2021

Lisbon, Portugal (Remote)

- Performed statistical analysis and exploratory data analysis using Python and R to identify patterns relevant to product quality management.
- Translated analytical results into validation criteria and decision support for Protected Designation of Origin standards and anti-counterfeiting controls.

EDUCATION

University of Lisbon

Master's in Bioinformatics and Computational Biology

Lisbon, Portugal

Sep. 2020 – Dec. 2023

University of Algarve

Biology, Minor in Computer Science

Faro, Portugal

Sep. 2017 – Jun. 2020

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, SQL, Bash, HCL, HTML, CSS, R

Backend & Web Frameworks: Django, Flask, FastAPI, NestJS, React, Next.js

Testing & Automation: pytest, Jest, Selenium, Playwright, BrowserStack, Allure, k6

Databases & Data Platforms: PostgreSQL, MySQL, SQLite, Redis, CockroachDB, BigQuery

Event Streaming, Messaging & Task Queues: Kafka, RabbitMQ, Celery, BullMQ, Debezium

Infrastructure as Code & Automation: Terraform, Ansible, AWX, Rundeck

Containers, Orchestration & Web Serving: Docker, Docker Swarm, Kubernetes, Nginx, Gunicorn

Cloud & Infrastructure Platforms: AWS, Google Cloud Platform (GCP), OpenStack, VMware, Cloudflare, Vercel, vCenter

Monitoring & Observability: Grafana, Prometheus, Elastic Stack, OpenTelemetry, LogicMonitor

Version Control & Collaboration: Git, GitHub, GitLab, Jira, Notion

Identity & Authentication: Keycloak, Clerk

Developer Tools: Vite, Postman, DBeaver, Visual Studio Code, PyCharm, Jupyter

Operating Systems: Linux, Windows, macOS
